

HIGH PERFORMANCE FLOCCULANT

Knockdown

Forces Contaminants to the Pool Bottom

Pool professionals demand a fast, powerful flocculant when working on tough cloudy pools. Lo-Chlor's Knockdown, a non-alum flocculant, includes a clarifier solution to save time and effort.

How does a flocculant differ from a clarifier?

Clarifiers working alone help the pool filter pick up small particles that make pools cloudy, but this can put a significant burden on the filter. Flocculants act faster by clumping tiny suspended particles into larger clumps, or flocs, while the filter is turned off.

Knockdown drops a wide range of debris, whether filterable or not, to the pool bottom where it can be easily and quickly vacuumed out. It also includes a polishing clarifier to finish the job and it won't affect water balance.

Use just 8-10 ounces per 10,000 gallons of pool water; Knockdown is concentrated. It begins working immediately and finishes the job quickly. Knockdown typically delivers high clarity overnight.

- **Drops suspended particles to pool bottom**
- **Cleans and clarifies pool water**
- **Enables easy vacuum removal**
- **Effective over a wide pH range**
- **Use with all sanitizer types**
- **Works with all pool surfaces**
