

# POOL ALGICIDE

*Lasts 3 months with one application!*

Safe. Economical. Highly Effective.

Excellent general-purpose algicide that remains active in pool water for 90 days.

- **Lasts 3 Months**
- **Safe for your family**
- **Safe for all pool finishes**
- **Economical and effective**
- **Significant clarifying effect**
- **Guaranteed non-staining formula**
- **Compatible with most pool chemicals**
- **Kills black, blue-green & mustard algae**
- **Great maintenance protection product**
- **Boosts efficiency of sanitizing chemicals**
- **Helps salt-chlorine generators work more effectively**

This unique organo-copper complex is effective against most common algae and safe for all pool surfaces. There are over 30,000 species of algae. Some algae like blue-green algae, float in the water; while others like mustard algae and black algae cling to the surface, and thrive in cracks and crevices. There are even species that are resistant to chlorine. One application of Lo-Chlor Algicide lasts for 90 days; that's three full months...an entire swimming season in some parts of the country. Lo-Chlor Algicide has a slow-release property that kills active algae and prevents outbreaks. That same special formulation prevents copper from dropping out of solution, so it is guaranteed to be non-staining when used as directed in a properly balanced pool. Lo-Chlor Algicide helps chlorine work better and is safe for use with most sanitizers.

Please note: While Lo-Chlor Pool Algicide is compatible with most sanitizers, it is not recommended for use with ionizers, Baquacil or Nature 2 Systems
