

SALT CELL PROTECTOR

Prevents calcium deposits on salt-chlorine generation cells

Protect. Prevent. Enhance.

A salt-chlorine generator is one of the best assets you can have on a pool. Lo-Chlor Salt Cell Protector is one of the best ways to protect that asset.

- **Easy to use**
- **Extends cell life**
- **Lasts 6 months**
- **Reduces cell cleaning**
- **Great for new pool start-up**
- **Enhances chlorine production**
- **Improves cell performance up to 50%**

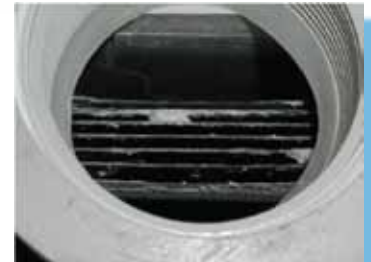

Lo-Chlor Salt Cell Protector coats the cell of the blades in your salt-chlorine generator that actually produce the chlorine. This protective coating prevents formation of the scale that inhibits chlorine production and ultimately defeats the blades ability to sanitize the pool water. So easy to use, simply add Lo-Chlor Salt Cell Protector directly to the pool water. Regular use of Lo-Chlor Salt Cell Protector, just one application every six months, will assure the maximum operation of the cell and the most efficient production of chlorine.

**POOL WITHOUT
SALT CELL
PROTECTOR**
Scale build-up on cell

**POOL WITH
SALT CELL
PROTECTOR**
No scale build-up
on cell blades
